

PROFILE SUMMARY

Experienced Data Engineer specializing in Azure with over three years of expertise in designing, implementing, and managing data solutions on Azure and related platforms. Skilled in using Azure Data Factory, Azure SQL Database, Azure Databricks, and Power BI to build scalable, high-performance data workflows, ensuring data accuracy and operational excellence.

Proficient in ETL processes, data modeling, and creating impactful visualizations to support data-driven decisions. Demonstrated success in leveraging Azure for cloud infrastructure management, integrating data from multiple sources, and optimizing performance across environments. Strong technical background in Informatica and Oracle DB administration, with experience in job scheduling tools like Tidal and Control-M, enhancing system reliability and efficiency. Committed to continuous improvement, effective collaboration, and delivering insights that align with business goals.

TOOLS/TECHNICAL SKILLS

- ❖ Data Integration and ETL:
Informatica PowerCenter | Informatica ETL
Informatica Administration | AWS Glue
Microsoft Azure Data Factory
- ❖ Data Warehousing and Storage:
Data Warehousing | Snowflake | AWS
Redshift | AWS S3 Microsoft Azure Data Lake
Gen2 & Microsoft Azure Blob storage
- ❖ Business Intelligence and Analytics:
Power BI | Microsoft Azure Synapse |
Tableau Microsoft Azure Databricks
- ❖ Database Management and Development:
Oracle SQL Developer
Oracle Database Management
- ❖ Cloud Computing Platforms:
Microsoft Azure | AWS
- ❖ Mainframe and Development Tools:
Mainframe (ISPF, JCL, GDG, VSAM,
COBOL), Java, Eclipse & XML
- ❖ Job Scheduling and Automation:
Tidal/Control-M Scheduler, Airflow basics
Bash and Python Scripting,
- ❖ IT Service Management and Tools: Jira |
Service Now | ITSM | Change Management
- ❖ Operating Systems and Server
Management: Linux | Linux Server
Administration
- ❖ Security and Disaster Recovery:
Disaster Recovery Planning

Hrishabh Tripathi

Data Engineer | ETL/ELT Developer | Power BI & Data Analyst

WORK EXPERIENCE

DXC Technology

📍 Hybrid

Analyst 2 - Data Engineer

(Aug-2022 - Present)

- Implemented Azure Data Factory for ETL processes, orchestrating data workflows across Azure services and on-premises sources, streamlining data pipeline processes.
- Monitored workflows and sessions meticulously, identifying and analyzing failures to enhance system reliability and ensure smooth operations.
- Achieved an overall 25% improvement in system performance and operational efficiency by optimizing Azure Data Factory workflows, enhancing resource management in Azure virtual machines, and refining data transformation processes in Azure Databricks.
- Managed Azure Cloud Services for infrastructure, provisioning virtual machines, storage accounts, and networking components to optimize system performance and cost efficiency.
- Utilized Azure Monitor for proactive monitoring of application health and performance metrics, ensuring rapid incident response and minimal downtime.
- Integrated Azure Databricks into data workflows to enable high-performance data processing and analytics, enhancing scalability for ETL pipelines.
- Managed and resolved technical issues across Production, Integration, and Development environments, ensuring continuous high availability and optimal system performance through Linux server management.
- Utilized Tidal and Control-M for job scheduling and SQL for data analysis, ensuring timely data loading and addressing user issues related to Apace, maintaining data integrity.
- Worked with Java Eclipse to handle frontend tasks such as XML processing, reviewed logs to identify and troubleshoot issues, and investigated Java code when required to resolve system-related problems.
- Ensured timely generation of extracts by monitoring rollups and fixing master ID issues, ensuring accurate and available data.
- Implemented Maintenance Task Instructions (MTIs) and Maintenance Task Plans (MTPs), analyzing and addressing support tickets to maintain seamless operations.
- Analyzed issues and recovered failed jobs in Oracle DB on Linux servers, ensuring timely data processing and coordination with source systems for file receipt.
- Addressed support tickets related to Customer/Partner Hierarchy, enhancing data accuracy and system functionality for improved business insights.
- Automated recurring file validation and transformation tasks using VBA, Power Query, and PowerShell for different workflows, collectively saving over 90% of manual effort and enabling faster issue resolution and reporting.
- Expertise in Power BI for creating interactive dashboards and reports, providing valuable insights into business operations and facilitating data-driven decision-making.

TRAININGS

- Power Bi
- AZ900
- DP900
- DP203
- PL300
- AI102
- AWS Cloud Practitioner
- AWS (Amazon Web Services) Training
- Informatica ETL Development
- Informatica Administration
- SQL
- Linux Training

ACHIEVEMENT

 Received the FY24 Q4 Champs Award from DXC Technology Pvt Ltd for being one of the top performers

 5 Star Codechef

EDUCATION

Jaypee University of Information Technology
B.Tech (HONS)- Computer Science & Engineering (2018 - 2022)

GPA : 8.5 cgpa

LANGUAGES

English | Hindi | Tamil (basics)

Research Design and Standards Organization

Jul-2021 - Aug-2021

Data Intern

- Designed and implemented a Railway Reservation System to manage ticket bookings, cancellations, passenger records, and seat availability efficiently.

Durapid Technologies Private Limited

Feb-2021 - Apr-2021

Web Development Intern

- Design the webpage of clients of the startup according to the requirements. Confer with clients to discuss and determine layout design. Research new software or design concepts.

CERTIFICATIONS

- Microsoft Azure Fundamentals (AZ900)
- Microsoft Azure Data Fundamentals (DP900)
- Microsoft Azure Data Engineer Associate (DP203)
- Microsoft Power Bi Data Analyst (PL300)
- Microsoft Certified: Azure AI Fundamentals (AI900)
- AWS Cloud Practitioner Certified
- AWS Certified Data Engineer - Associate
- AWS Certified AI Practitioner
- SQL Boot camp certificate
- Linux the complete guide
- The Complete Mainframe Professional Course
- Completed IBM Data Science course
- LOMA281 certified

Projects

Azure Data Factory for Data Engineers - Covid19 project

I built and managed automated data pipelines using Azure Data Factory (ADF) to ingest, transform, and load COVID-19 data from external APIs and Azure Blob Storage into Azure Data Lake Gen2 and Azure SQL Database. I utilized ADF Mapping Data Flows for data transformations such as filtering, aggregation, and joins.

I orchestrated workflows using ADF control flow activities like ForEach and If Condition, and scheduled pipeline execution with triggers including Event, Schedule, and Tumbling Window. Additionally, I integrated Azure Databricks for advanced processing, implemented CI/CD pipelines in Azure DevOps for deployment automation and monitored pipeline performance using Azure Monitor and Log Analytics, ensuring high system reliability and efficient data processing.

Power BI Dashboard for SLA Compliance and Trend Analysis

I developed an interactive Power BI dashboard to track SLA (Service Level Agreement) compliance for incidents. I collected and transformed data from various sources, including SQL Server and Excel, and created dynamic reports that showcased SLA metrics such as missed, met, and breached SLAs.

The dashboard included trend analysis over time, visualizing SLA performance through charts like line graphs, pie charts, and tables. I utilized advanced DAX calculations for custom measures like SLA missed count, SLA met count, and weekly trends. The dashboard empowered decision-makers by providing real-time insights and actionable data for improving operational efficiency. I also implemented Power BI Row-Level Security (RLS) to ensure data visibility was restricted based on user roles.
