PROFESSIONAL SUMMARY

Experienced Data Engineer and BI & Analytics professional with 3+ years of experience designing scalable ETL/ELT pipelines, data warehouses, and analytics solutions. Skilled in Azure Data Factory, Azure Databricks, Snowflake, PySpark, and advanced SQL for building reliable, high-performance data platforms. Experienced in developing Power BI dashboards and Python-based automation solutions that improve operational efficiency and reduce manual effort. Strong background in data modeling, workflow orchestration, cloud technologies, and production support across enterprise environments.

TECHNICAL SKILLS

Data Engineering & Processing: Azure Data Factory, Azure Databricks, ETL/ELT Pipelines, Informatica PowerCenter, PySpark, Data Transformation

Database & Querying: Advanced SQL, Snowflake, Azure SQL Database, Oracle SQL, Db2, Query Optimization, Data Modeling

Data Warehousing & Storage: Azure Data Lake Gen2, Azure Blob Storage, Azure Synapse, Microsoft Fabric

Business Intelligence & Automation: Power BI, DAX, Dashboard Development, Reporting Automation, Advanced Excel, Python (Tkinter, ttkbootstrap), Selenium, Power Automate, Terraform, PowerShell, Bash, VBA

Orchestration & Workflow: Control-M, Tidal, Airflow, Dependency Management

Cloud Platforms & Mainframe: Microsoft Azure, AWS, Databricks, ISPF, JCL, COBOL, VSAM, GDG, TSO, FTP, Batch Processing

Development Practices & Tools: Agile, Jira, Git, Incident Management, Change & Release Management, DevOps Concepts, Linux, Windows, Java (Eclipse), IBM WebSphere

AI & Machine Learning: Azure OpenAI, LLM & RAG, Azure AI Services, Prompt Engineering

WORK EXPERIENCE

DXC Technology

Analyst 1 - Data Engineer | Hybrid | Aug-2022 - Present

- Designed and implemented scalable ETL/ELT pipelines using Azure Data Factory and Informatica to ingest data from multiple on-premises and cloud sources into Azure Data Lake and downstream data stores for analytics and reporting; automated data workflows significantly improving orchestration efficiency, minimizing manual intervention, and ensuring timely data availability for downstream systems.
- Improved data processing performance by 25% through advanced SQL optimization, efficient transformation logic, and workload tuning across Azure SQL and Snowflake environments; designed Snowflake data warehouse solutions integrating and transforming data from diverse sources using SQL joins, data modeling techniques, and structured transformations to deliver curated, analysis-ready datasets for BI consumption.
- Implemented large-scale data transformation using Azure Databricks and PySpark to efficiently handle complex data workloads; led migration from on-premises to Azure Data Lake and Blob Storage, ensuring data integrity, scalability, and efficient storage management.
- Designed and developed robust automation solutions using Python (Tkinter, ttkbootstrap), Selenium, Power Query, VBA, and SQL scripts, reducing manual effort by over 90% and improving operational efficiency; led process optimization initiatives integrating intelligent tooling to accelerate development.
- Developed and maintained enterprise Power BI dashboards and reports including Incident Management, Jira Tracking, Resource Utilization, Innovation Program, WBS, Account Demand, and Change Project tracking; designed, published, and managed centralized Power BI App to consolidate reporting solutions, automate refresh processes, streamline user access, and improve report governance across stakeholders.
- Developed automated Incident and RITM alerting solutions using Power Automate and Microsoft Teams, enabling real-time notifications and significantly improving response times for support teams.
- Orchestrated job workflows using Control-M and Tidal for scheduling and dependency management, ensuring timely execution and addressing dependencies across complex data pipelines.
- Monitored and maintained data pipelines across Development, Integration, and Production environments, ensuring high reliability, availability, and strict adherence to SLAs; managed and resolved technical issues ensuring continuous high availability and optimal system performance through Linux server administration.
- Implemented monitoring, logging, validation, and batch-tracking frameworks to ensure high data quality, reliable pipeline execution, proactive issue identification, and operational stability.
- Collaborated with cross-functional teams in Agile environment using Jira, supporting DevOps-aligned practices including version control, deployment coordination, change management, structured release processes, and migration of source code repositories from CVS to Bitbucket to improve security compliance and support vulnerability remediation initiatives.
- Supported production incidents and change/release management activities, performing root cause analysis, environment validation, deployment support, and rapid issue resolution to ensure seamless business operations; worked with Java Eclipse for XML processing, reviewed logs to identify and troubleshoot issues, and investigated Java code when required to resolve system-related problems.

PROJECTS

- **Azure Data Pipeline (Azure Data Factory + Databricks + Snowflake):** Designed and implemented ETL/ELT pipelines using Azure Data Factory to ingest data from APIs, databases, and cloud storage into Azure Data Lake and Snowflake. Utilized Azure Databricks (PySpark) for scalable data transformation and processing.
- **Enterprise Power BI Reporting Platform:** Developed and maintained Power BI solutions for Incident Management, Jira, Resource Utilization, Innovation Program, WBS, Account Demand, and Change Project tracking. Published and managed reports through a centralized Power BI App with automated refresh scheduling.
- **Incident & RITM Alert Automation (Power Automate + Microsoft Teams):** Developed automated workflows for Incident and RITM monitoring, delivering real-time Microsoft Teams notifications and reducing manual monitoring effort.
- **Reporting & Validation Automation Suite (Python + SQL + Excel):** Built automation tools using Python, SQL, Power Query, and Excel for reporting, validation, and reconciliation processes, reducing manual effort by over 90%.
- **Operational Support & Mainframe Automation Tools:** Built Python-based utilities for Mainframe FTP operations including job status monitoring, JCL library syncing, and dataset management. Developed tools for XML processing, batch monitoring, incident and OneForm reporting, and Eclipse automation using Tkinter, ttkbootstrap, Selenium, and SQL.

INTERNSHIP EXPERIENCE

Research Design and Standards Organization

Data Intern | Jul-2021 - Aug-2021

Designed and implemented a Railway Reservation System to manage ticket bookings, cancellations, passenger records, and seat availability efficiently.

Durapid Technologies Private Limited

Web Development Intern | Feb-2021 - Apr-2021

Designed webpages for startup clients based on requirements and layout specifications. Collaborated with clients to determine design direction and conducted research on new software and design concepts.

CERTIFICATIONS

- Microsoft Azure Fundamentals (AZ900)
- Microsoft Azure Data Fundamentals (DP900)
- Microsoft Azure Data Engineer Associate (DP203)
- Microsoft Power BI Data Analyst (PL300)
- Microsoft Certified: Azure AI Fundamentals (AI900)
- AWS Cloud Practitioner Certified
- AWS Certified Data Engineer - Associate
- AWS Certified AI Practitioner
- SQL Boot camp certificate
- Linux the complete guide
- Microsoft Certified: Fabric Data Engineer Associate (DP700)
- Snowpro Core Certified
- Microsoft Certified: Power Platform Developer Associate (PL400)
- Databricks Certified Data Engineer Associate
- LOMA281 certified

EDUCATION

Jaypee University of Information Technology

B.Tech (HONS) - Computer Science & Engineering | 2018 - 2022 | GPA: 8.5 CGPA

ACHIEVEMENTS

- Received the FY24 Q4 Champs Award from DXC Technology for outstanding performance and delivery excellence.
- Received the FY26 H1 Champs Award from DXC Technology for consistent high performance and impactful contributions.

LANGUAGES

English, Hindi
